

# Setup Home Wireless

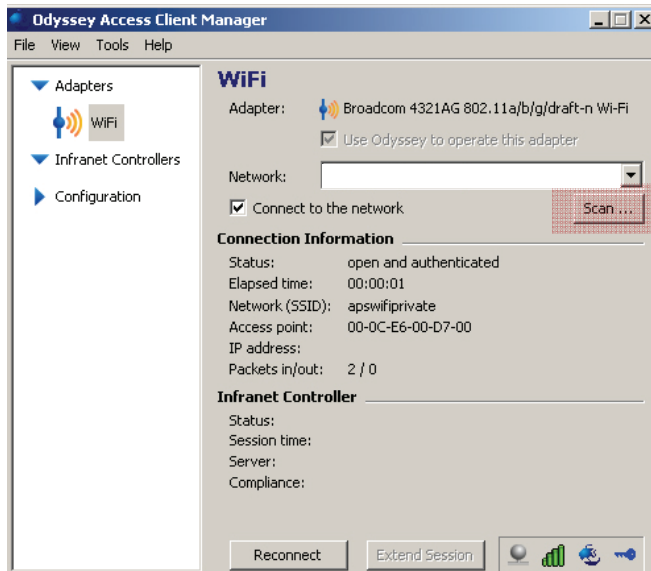

Use this guide to connect your APS-provided laptop to your home wireless network using the Odyssey Access Client.

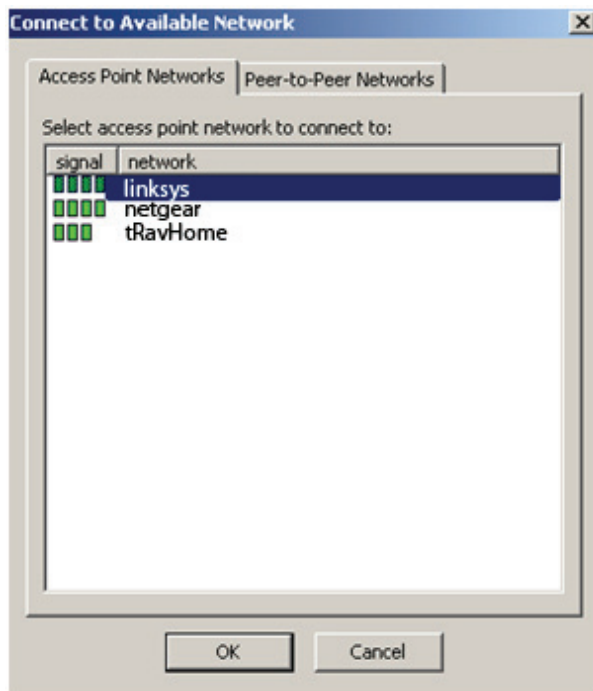

**Please make sure your wireless card is turned on before beginning this guide!**  
Your wireless button must be blue. The button is above the F4 key on the touch panel.

Double-click the Odyssey Access Client icon in the system tray.

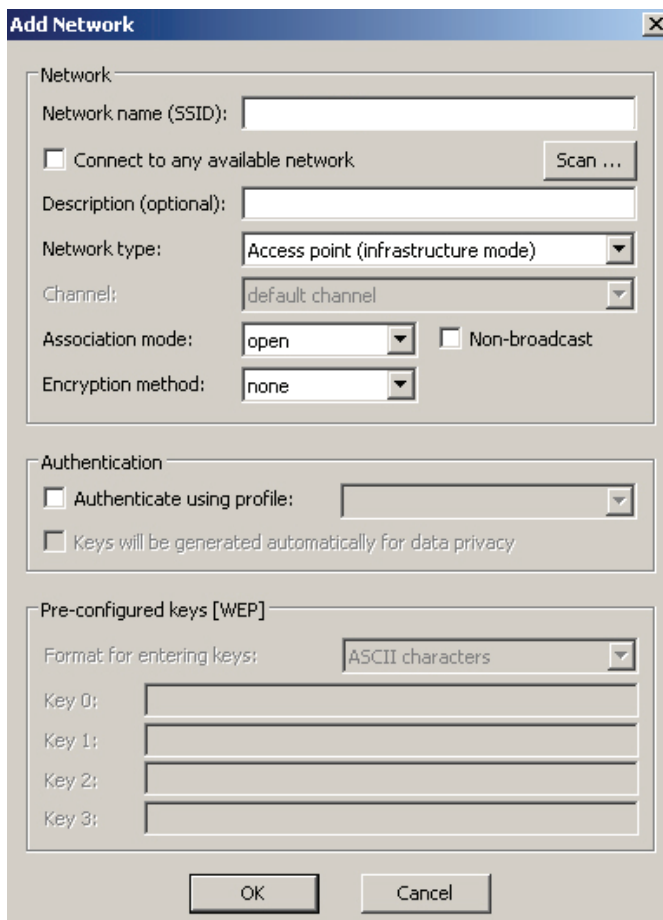

Click Scan

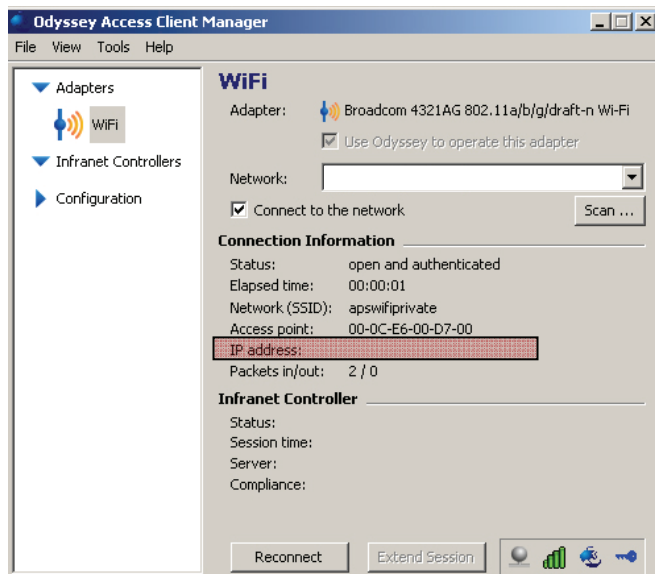

Find your home wireless network in the scan list, select it, and then click OK.

The Add Network dialog box opens.

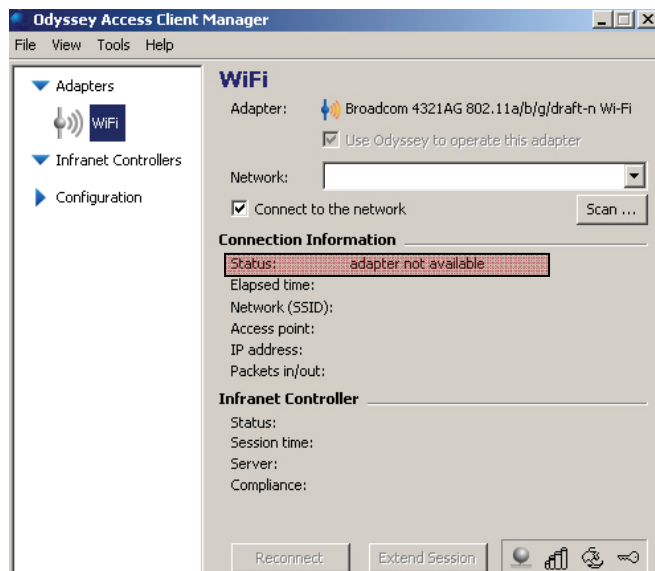

- The Network Name (SSID) is populated automatically.
- Select an association mode.  
*Odyssey should have this field filled in automatically.*
- Select an encryption method.  
*Odyssey should have this field filled in automatically.*
- If using WEP for Encryption mode, please see note in red below before entering key. Enter your wireless password/passphrase/key in the box that appears once you select the proper association/encryption modes.  
*If you are using WEP you will need to change the **Format for entering keys** option to either ASCII or Hexadecimal depending on the following: Hexadecimal keys are 10 characters or 26 characters. ASCII keys are 5 characters or 13 characters.*
- Once you have setup your network, click OK.

# Troubleshooting Odyssey

If Odyssey shows IP address as blank or 169.x.x.x then you are not properly connected to your wireless network, please check/confirm your Odyssey client is configured the same as your router. If you do not know these settings, you will need to verify this with the person/company who setup your network or via the router's web interface. Popular router models (Linksys, Dlink, etc.) have documentation on their website to assist in obtaining this information.

If Odyssey shows Status as *Adapter Not Available* it means that your wireless card is off/disabled. Your wireless button should be blue. The button is above the F4 key on the touch panel. Once you turn it on, Odyssey's status should change, if it does not, please restart your computer and try again.

If Odyssey shows *Waiting for keys* and nothing happens after 1 minute, it means you have not entered the correct settings for your network, please check/confirm these settings in Odyssey.
